

U-CODER AI DOCUMENTATION

Step 1: Go to Menu **Tools->UCoder Ai**

Step 2:

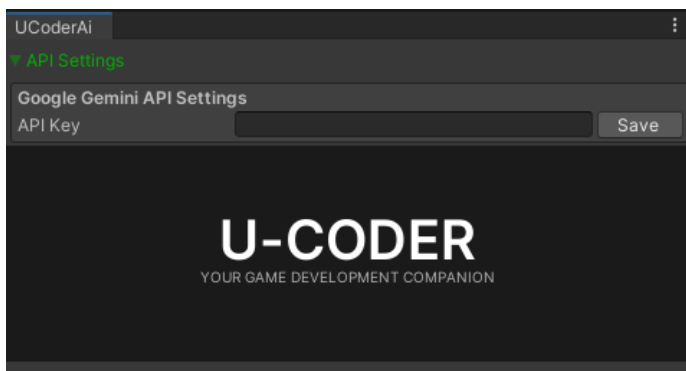

What you need is a Google Account.

Go to <https://aistudio.google.com/app/apikey>

Click on “Create API Key” or use the key you already created.

Copy the key.

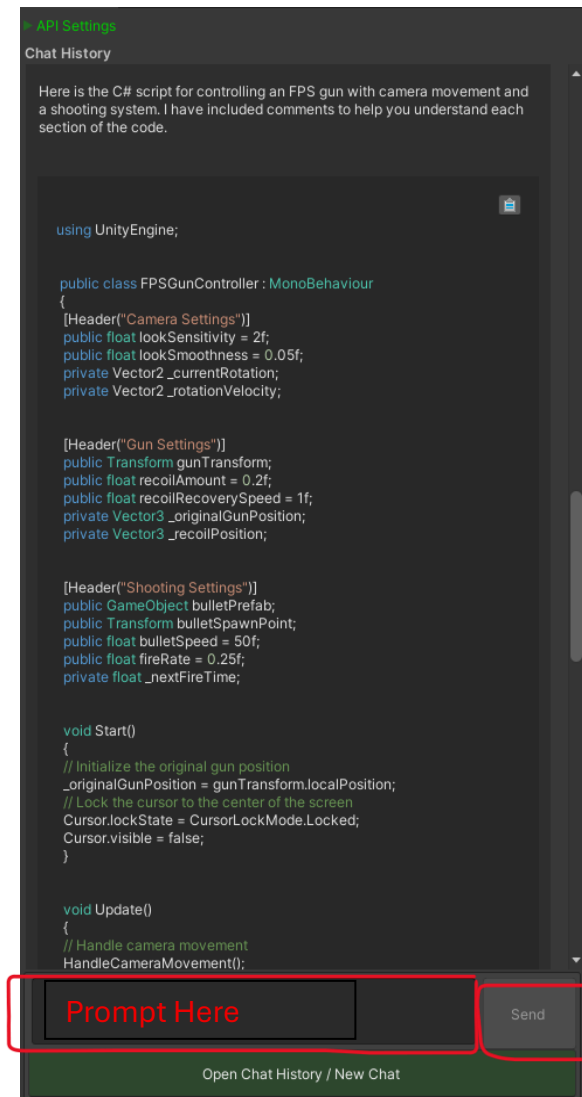

Go back to **UCoder Ai** in Unity.

Paste the copied key and Press the Save button.

Now you don't need to add the key again for other projects it will auto assign when U-CODER added to another project.

Step 3:

PROMPTS GUIDE

01. Create new Script File in Project (**first select a script file**)

- Need to mention explicitly that create a script if you want the U-CODER to create the file automatically.
- Eg. **Create a script** for FPS Player Controller, locomotion with WASD keyboard

02. Replacing a Script File in Project (**first select a script file**)

- Same goes for Replacing code in a script, you must ask the U-CODER to replace the existing code of selected script with newly requested code.
- Eg. Fix the bugs in attached code and **replace the file** with new code.

03. Code explanations (**first select a script file**)

- a. Ask the U-CODER that explain the attached code.
- b. Eg. Please explain the attached code, breakdown in parts and write proper explanations regarding each part.

04. Normal Discussions

- a. When starting a normal chat just do not select any of script file, so it will never go as attachment with chat. Only scripts files are allowed to select while processing the code other files does not take any effect if selected.

You can chat in multiple languages as this is the Multilingual model
